HANSAmed chosen to represent Metatray Professional Whitening on The Go

EL SEGUNDO, Calif. (BUSINESS WIRE) Feb. 22, 2006

Remedent, Inc. (OTC BB: REMI), a leader in the research and development, manufacturing and marketing of oral care and cosmetic dentistry products, today announced that it will demonstrate its Metatray™ tooth whitening system at the Midwinter Meeting of the Chicago Dental Society. The meeting begins February 24 at Chicago's Lakeside Center at McCormick Place and runs through February 26.

The demonstrations will take place at Remedent's booth (#2561) throughout the course of the convention.

In addition, representatives of HANSAmed Limited, of Ontario, Canada, will be at Remedent's booth during the convention. HANSAmed has recently signed a distribution agreement with Remedent to make the Metatray tooth whitening system available in Canada. Remedent sees this as a significant step toward a substantial market presence in North America. Remedent is also pursuing similar agreements with companies in the United States.

The Metatray™ combined with the Meta foam strips form a revolutionary new whitening solution that brings an extra dimension to teeth whitening. It is also the world's first 'at home' power bleaching system. It produces high quality, long-lasting results similar to in-office procedures. The Metatray concept is the first whitening system that combines the traditional mouth tray with the latest technology in light and heat energy. These are critical elements to enhance the whitening process of the Meta foam strips and dramatically shorten the treatment time.

Reality Publishing Company, which serves the dental community with product reports and whose flagship publication Reality is considered the "bible of cosmetic dentistry," has nominated Remedent's Metatray for an award in the category of "Most Unique First Look."
